Performance Starts with Profiling

Winning over an audience is like winning a championship—success depends on strong muscles, precise coordination, high dynamics, and the perfect timing.

Voice Vector® Analysis

All today's elite athletes start by understanding exactly how their bodies perform—only then can they train with precision. The same is true for speakers. That's where Acoustic Voice Profiling® comes in. It delivers an unprecedented level of detail about your key Voice Vectors®:

Intonation, tempo, pausing, voice quality, and even attention and natural authority—captured through your acoustic body size.

With these insights, targeted training of your vocal charisma becomes not just possible—but powerfully effective.

Developed by experts from speech science and technology

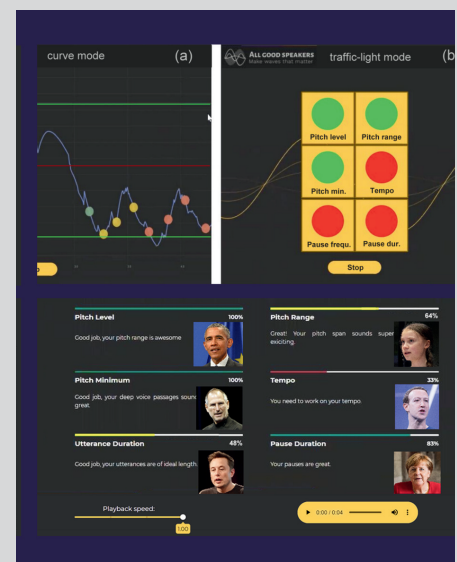

Let us be your full-service voice gym!

Once we've measured your vocal potential, we also offer you the tools to unlock it—with cutting-edge technologies that turn insight into impact.

The core principle is: learning through visualization. Only when you can see your voice, you can shape and improve it!

(1) **The Pitcher**: a screen-based tool for a more powerful intonation and speech rhythm; (2) **AppGoodSpeakers**: Our VR environments that boost your loudness, pausing, and tempo control; (3) the **MARRYS cap** optimizes jaw movements for more clarity, resonance, and acoustic body size

Increase the charismatic impact of your voice with Acoustic Voice Profiling® technologies

The Average Speaker

With Professional Acoustic Voice Profiling®

When your voice is in top shape, your message goes the distance! And it works: average speakers increase their vocal charisma by 32% or more after just a few hours. In addition, our gender-sensitive profiling and training reduces anxiety, boosts confidence, and strengthens belief in your own abilities.

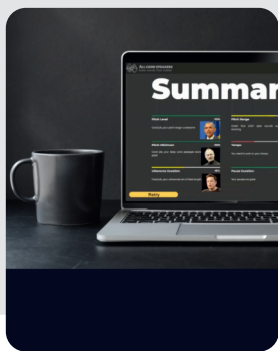

Speak stronger. Lead smarter. Win the room. Check out our Acoustic Voice Profiling® packages below.
